

INDEX TO THE HERBARIUM OF
EDWIN B. BARTRAM

Farlow Library and Herbarium
of Cryptogamic Botany
20 Divinity Avenue
Cambridge, Massachusetts 02138, U.S.A.

Revised December 1982

INDEX TO THE HERBARIUM
OF EDWIN B. BARTRAM (1878-1964)

Bartram's herbarium, destined for the Farlow since 1942, was transferred from his home in Bushkill, Pennsylvania, to Cambridge in August 1964, four months before his death. It consisted then of some 64,000 mounted specimens and about 8000 packets of duplicates and unidentified specimens. In February 1964, a further lot of some 5000, mostly unidentified specimens, were discovered and sent by his family. Some of the unmounted material has been added to the herbarium and many duplicates have been distributed. The General Herbarium at FH also contains many Bartram specimens, sent during his lifetime. Besides the holotypes of well over 2000 Bartram names, there are isotypes from Brotherus, Fleischer, Cardot, Theriot, and other correspondents. The herbarium is, of course, particularly strong in collections from Central and South America, Malaysia and Hawaii, on which Bartram published major studies, but a glance at the bibliography in Crum's memorial of Bartram (Bryologist 69: 124-134. 1966) will show the breadth of his interests.

The original index to the herbarium was prepared by Richard Fralik, under the direction of I. Mackenzie Lamb, in 1966-1967. Since then, corrections and additions have been recorded by the curatorial staff as addenda pages. The pages now issued incorporate all previous revisions. An asterisk has been placed on the species lists at the point where these should occur in the alphabetical arrangement. For this 1982 edition, the species lists themselves have been re-read, typing and spelling errors corrected, and names and authorities originally lacking or carrying a question mark have been verified from the specimen labels. A number of Bartram types not heretofore indicated have been underlined. We repeat here that, as with all Farlow indexes, the underlining of types is based solely on information from

the labels and implies no judgment or designation by us. Since the original index was prepared without benefit of most of the volumes of Index muscorum, many inconsistencies appear, particularly in the designations and abbreviations of authorities.

Bartram's association with the Farlow Herbarium was long, fruitful for both sides, and, except for an eight year hiatus, cordial, according to the Farlow directors' correspondence. He held an appointment as Honorary Curator of Bryophytes from 1937 to his death, and identified most of the major exotic collections received by the Herbarium during that period. He served on the editorial board of Farlowia during the life of that journal (1943-1955) and contributed to all but one of the volumes. The Farlow Herbarium received under his will, besides a major herbarium, 13 large portfolio boxes of letters to him and two boxes of other manuscripts. Eventually, the Farlow will be the beneficiary of the remainder of his estate, the income from which he designated for a bryological curatorship.
